

Lab Experiment-13

13.Perform Affine Transformation on the given image using python and Open CV

Code:

```
!pip install opencv-python
import cv2
import numpy as np
from google.colab import files
from google.colab.patches import cv2_imshow
f = files.upload()
file = list(f.keys())[0]
img = cv2.imread(file)
pts1 = np.float32([[50,50],[200,50],[50,200]])
pts2 = np.float32([[10,100],[200,50],[100,250]])
matrix = cv2.getAffineTransform(pts1, pts2)
result = cv2.warpAffine(img, matrix, (300,300))
cv2_imshow(img)
cv2_imshow(result)
```

Output:
